

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A task light comprising: plural illumination means aligned in the horizontal direction on a display that is rotatable about a vertical axis with respect to a console; a detection means for detecting a rotational position of the display with respect to the console; and a lighting means for selectively lighting at least one of the plural illumination means so as to illuminate approximately the entire console, based on the rotational position of the display detected by the detection means; wherein a first rotational position illuminates the console using a first illumination means, wherein a second rotational position illuminates the console using a second illumination means, and wherein a third rotational position illuminates the console with a third illumination means; wherein the first illumination means further comprises the second and third set of plural illumination means to illuminate the console, and wherein the second illumination means is not the third illumination means.

Claim 2 (Currently Amended): A task light comprising: rotatable illumination means provided approximately at the center in the

horizontal direction on a display that is rotatable about a non-horizontal axis with respect to a console; and a rotating means for rotating the illumination means so as to illuminate approximately the entire console, based on the rotational position of the display with respect to the console detected by a detection means.

Claim 3 (Cancelled)

Claim 4 (Cancelled)

Claim 5 (Previously presented): The task light of claim 1, wherein the detection means has an at least one mutually opposing conductive member adaptable with a contact metal fitting to correspond to the position of the display.

Claim 6 (New): The task light of claim 1, wherein illumination from the plural illumination means is simultaneously directed onto the console and substantially parallel to the vertical axis.

Claim 7 (New): The task light of claim 2, wherein the illumination means are rotatable about a horizontal axis that is

respect to the console and perpendicular to a viewing panel of the display.

Claim 8 (New): The task light of claim 2, wherein the non-horizontal axis is vertical with respect to the console.
